EXPERIMENT – 1

STUDY OF COMPUTER FORENSICS AND DIFFERENT TOOLS USED FOR FORENSIC INVESTIGATION

AIM

To study computer forensics and the different tools used for forensic investigation.

PROCEDURE

1. Study the concept and importance of digital forensics in investigating cybercrimes.
2. Understand how digital evidence is collected from computer systems.
3. Study the different types of digital evidence, such as log files, registry changes, malware, and deleted files.
4. Study commercial forensic tools such as EnCase Forensic, Forensic Toolkit (FTK), and ProDiscover.
5. Examine open-source forensic tools such as The Sleuth Kit (TSK), Helix, and Knoppix.
6. Study **FTK Imager**, which is used for forensic disk imaging and file recovery.
7. Examine **Log Parser Lizard GUI**, which is used to analyze log files.
8. Study **Active@ Partition Recovery**, which is used to recover deleted partitions.

ROLL NO: 241901128

9. Examine **Autopsy**, a digital forensics platform used to investigate computer systems and recover digital evidence.
10. Understand how forensic tools help collect, examine, and analyze digital evidence during an investigation.

OBSERVATION

Digital forensics involves identifying, collecting, examining, and analyzing digital evidence. Various commercial and open-source tools provide features for disk imaging, log analysis, file recovery, and computer investigations.

RESULT

Thus, computer forensics and the different tools used for forensic investigation were studied successfully.
