EXPERIMENT – 2

LIVE FORENSICS CASE INVESTIGATION USING AUTOPSY

AIM

To investigate a live forensic case using Autopsy and analyze digital evidence from a computer system or storage device.

PROCEDURE

1. Open Autopsy and click **New Case**. Enter the case name and base directory.
2. Enter the case number and examiner details, then click **Finish**.
3. Select the appropriate data source and browse to the evidence file or device.
4. Configure the required **Ingest Modules** and click **Finish** to start processing.
5. Examine the forensic investigation results after processing is complete.
6. View device details, EXIF metadata, installed programs, operating system information, and user accounts.
7. Analyze recent documents, web bookmarks, cookies, downloads, browsing history, search history, and email addresses.
8. Review the extracted artifacts and document the findings.
